Let A be a ring and $\mathcal{P} \subseteq \text{Spec}(A)$ with index set \mathcal{A} such that $\bigcap_{\alpha \in \mathcal{A}} P_{\alpha} = 0$. Take $\mathcal{I} = \mathcal{A} \times \mathbb{N}$ and for $i = (\alpha, m) \in \mathcal{I}$, $P_i = P_{\alpha}$.

A + B Construction

Identify A with its image in $\prod_{i \in \mathcal{I}} A/P_i$ and let $B = \sum_{i \in \mathcal{I}} A/P_i$.

$R = A + B$ is our desired ring, with addition and multiplication defined coordinate-wise.

Take $a \in A$ and $b \in B$. So $a + b$ looks like:

$$(\dots a + P_{i_1}, x_1 + P_{(\alpha,1)}, a + P_{(\alpha,2)}, x_2 + P_{(\alpha,3)}, \dots, a + P_{i_2} \dots)$$

Constructing New Rings

Let A be a ring and $\mathcal{P} \subseteq \text{Spec}(A)$ with index set \mathcal{A} such that $\bigcap_{\alpha \in \mathcal{A}} P_\alpha = 0$. Take $\mathcal{I} = \mathcal{A} \times \mathbb{N}$ and for $i = (\alpha, m) \in \mathcal{I}$, $P_i = P_\alpha$.

$A + B$ Construction

Identify A with its image in $\prod_{i \in \mathcal{I}} A/P_i$ and let $B = \sum_{i \in \mathcal{I}} A/P_i$.

$R = A + B$ is our desired ring, with addition and multiplication defined coordinate-wise.

Take $a \in A$ and $b \in B$. So $a + b$ looks like:

$$(\dots a + P_{i_1}, x_1 + P_{(\alpha,1)}, a + P_{(\alpha,2)}, x_2 + P_{(\alpha,3)}, \dots, a + P_{i_2} \dots)$$

Note we are only changing $a \in R$ in finitely many components, based on the finitely many nonzero components of b .

Facts and details about $A + B$ rings

Take A a ring and $\mathcal{P} \subseteq \text{Spec}(A)$ as before.

$A + QB$ Construction

Identify A with its image in $\prod_{i \in \mathcal{I}} Q(A/P_i)$ and let

$QB = \sum_{i \in \mathcal{I}} Q(A/P_i)$. $S = A + QB$ is our desired ring, with addition and multiplication defined coordinate-wise.

 $A+B$ and
 $A+QB$

Take A a ring and $\mathcal{P} \subseteq \text{Spec}(A)$ as before.

$A + QB$ Construction

Identify A with its image in $\prod_{i \in \mathcal{I}} Q(A/P_i)$ and let

$QB = \sum_{i \in \mathcal{I}} Q(A/P_i)$. $S = A + QB$ is our desired ring, with addition and multiplication defined coordinate-wise.

Note that (with the same base ring A and set of primes \mathcal{P})
 $A + B \subseteq A + QB$; equality holds if and only if $\mathcal{P} \subseteq \text{Max}(A)$.

Facts and details about $A + QB$ rings

(We will assume from now that $S = A + QB$ is constructed as before from a ring A and set of prime ideals \mathcal{P} .)

Proof of Theorem 1

\Rightarrow (contrapositive)

① or ② fails: As the prime ideals of A correspond to the prime ideals of R containing B , it follows R is not h-local.

③ fails: There exists $Q \subseteq \text{Spec}(A)$ \mathcal{P} -regular properly containing some $P_\alpha \in \mathcal{P}$. Note $Q \subseteq N \in \text{Max}(A)$. For $a \in Q$ \mathcal{P} -regular, $a \in R$ regular contained in $N + M_i$ with $i = (\alpha, n) \in \mathcal{I}$ for all $n \in \mathbb{N}$; R is not h-local.

④ fails:

Proof of Theorem 1

\Rightarrow (contrapositive)

① or ② fails: As the prime ideals of A correspond to the prime ideals of R containing B , it follows R is not h-local.

③ fails: There exists $Q \subseteq \text{Spec}(A)$ \mathcal{P} -regular properly containing some $P_\alpha \in \mathcal{P}$. Note $Q \subseteq N \in \text{Max}(A)$. For $a \in Q$ \mathcal{P} -regular, $a \in R$ regular contained in $N + M_i$ with $i = (\alpha, n) \in \mathcal{I}$ for all $n \in \mathbb{N}$; R is not h-local.

④ fails: If, for some $P_\alpha \in \mathcal{P}$, $a + P_\alpha \in A/P_\alpha$ nonzero and contained in $N_k/P_\alpha \in \text{Max}(A/P_\alpha)$, $k \in K$ (K infinite),

Proof of Theorem 1

\Rightarrow (contrapositive)

① or ② fails: As the prime ideals of A correspond to the prime ideals of R containing B , it follows R is not h-local.

③ fails: There exists $Q \subseteq \text{Spec}(A)$ \mathcal{P} -regular properly containing some $P_\alpha \in \mathcal{P}$. Note $Q \subseteq N \in \text{Max}(A)$. For $a \in Q$ \mathcal{P} -regular, $a \in R$ regular contained in $N + M_i$ with $i = (\alpha, n) \in \mathcal{I}$ for all $n \in \mathbb{N}$; R is not h-local.

④ fails: If, for some $P_\alpha \in \mathcal{P}$, $a + P_\alpha \in A/P_\alpha$ nonzero and contained in $N_k/P_\alpha \in \text{Max}(A/P_\alpha)$, $k \in K$ (K infinite), then for $i = (\alpha, 1) \in \mathcal{I}$, $1 + e_i(a - 1) \in R$ is regular and contained in $N_k + M_i \in \text{Max}(R)$, $\forall k \in K$; so R is not h-local.

Proof of Theorem 1

\Rightarrow (contrapositive)

① or ② fails: As the prime ideals of A correspond to the prime ideals of R containing B , it follows R is not h-local.

③ fails: There exists $Q \subseteq \text{Spec}(A)$ \mathcal{P} -regular properly containing some $P_\alpha \in \mathcal{P}$. Note $Q \subseteq N \in \text{Max}(A)$. For $a \in Q$ \mathcal{P} -regular, $a \in R$ regular contained in $N + M_i$ with $i = (\alpha, n) \in \mathcal{I}$ for all $n \in \mathbb{N}$; R is not h-local.

④ fails: If, for some $P_\alpha \in \mathcal{P}$, $a + P_\alpha \in A/P_\alpha$ nonzero and contained in $N_k/P_\alpha \in \text{Max}(A/P_\alpha)$, $k \in K$ (K infinite), then for $i = (\alpha, 1) \in \mathcal{I}$, $1 + e_i(a - 1) \in R$ is regular and contained in $N_k + M_i \in \text{Max}(R)$, $\forall k \in K$; so R is not h-local. (Similar argument if $Q/P_\alpha \in \text{Spec}(A/P_\alpha)$ is a nonzero contained in more than one maximal ideal of A/P_α .)

h-local in
A+B and
A+QB

- 1 Every \mathcal{P} -regular element of A has finite character in A .
- 2 Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- 3 For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- 4 A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

We give examples to show that these conditions are independent of each other, and thus all are required for Theorem 1.

For each example, we give a ring A and set of primes $\mathcal{P} \subseteq \text{Spec}(A)$ which will satisfy the stated conditions.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 1: only (1) fails

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 1: only (1) fails

Let $\beta\mathbb{N}$ be the Stone-Čech compactification of \mathbb{N} and take $A = C(\beta\mathbb{N})$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 1: only (1) fails

Let $\beta\mathbb{N}$ be the Stone-Čech compactification of \mathbb{N} and take $A = C(\beta\mathbb{N})$. For each $p \in \beta\mathbb{N}$, $M_p = \{f \in C(\beta\mathbb{N}) \mid f(p) = 0\} \in \text{Max}(A)$.

Independence of conditions

- 1 Every \mathcal{P} -regular element of A has finite character in A .
- 2 Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- 3 For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- 4 A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 1: only (1) fails

Let $\beta\mathbb{N}$ be the Stone-Čech compactification of \mathbb{N} and take $A = C(\beta\mathbb{N})$. For each $p \in \beta\mathbb{N}$, $M_p = \{f \in C(\beta\mathbb{N}) \mid f(p) = 0\} \in \text{Max}(A)$. Take $\mathcal{P} = \{M_p \in \text{Max}(A) \mid p \in \mathbb{N}\}$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 1: only (1) fails

Let $\beta\mathbb{N}$ be the Stone-Čech compactification of \mathbb{N} and take $A = C(\beta\mathbb{N})$. For each $p \in \beta\mathbb{N}$, $M_p = \{f \in C(\beta\mathbb{N}) \mid f(p) = 0\} \in \text{Max}(A)$. Take $\mathcal{P} = \{M_p \in \text{Max}(A) \mid p \in \mathbb{N}\}$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 2: only (2) fails

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 2: only (2) fails

Let $D = T^{-1}K[X, Y]$ where
 $T = K[X, Y] \setminus ((X, Y) \cup (X, Y - 1))$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 2: only (2) fails

Let $D = T^{-1}K[X, Y]$ where
 $T = K[X, Y] \setminus ((X, Y) \cup (X, Y - 1))$. Take $A = A' + QB'$
where $A' = D \times D$ and $\mathcal{P}' = \{D \times (0), (0) \times D\}$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 2: only (2) fails

Let $D = T^{-1}K[X, Y]$ where

$T = K[X, Y] \setminus ((X, Y) \cup (X, Y - 1))$. Take $A = A' + QB'$ where $A' = D \times D$ and $\mathcal{P}' = \{D \times (0), (0) \times D\}$. Then take $\mathcal{P} = \{M'_i \mid i \in \mathcal{I}'\}$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 3: only (3) fails

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 3: only (3) fails

Let $A = K[X, Y]_{(X, Y)}$, the localization of $K[X, Y]$ at the maximal ideal (X, Y)

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 3: only (3) fails

Let $A = K[X, Y]_{(X, Y)}$, the localization of $K[X, Y]$ at the maximal ideal (X, Y) and

$\mathcal{P} = \{\text{nonzero principal prime ideals of } A\} \setminus (X)A$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 3: only (3) fails

Let $A = K[X, Y]_{(X, Y)}$, the localization of $K[X, Y]$ at the maximal ideal (X, Y) and

$\mathcal{P} = \{\text{nonzero principal prime ideals of } A\} \setminus (X)A$.

Independence of conditions

- ① Every \mathcal{P} -regular element of A has finite character in A .
- ② Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- ③ For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- ④ A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 4: only (4) fails

Independence of conditions

- 1 Every \mathcal{P} -regular element of A has finite character in A .
- 2 Every \mathcal{P} -regular prime ideal of A is contained in a unique maximal ideal of A .
- 3 For every \mathcal{P} -regular prime ideal $P \in \text{Spec}(A)$, $P_\alpha \not\subseteq P$ for all $P_\alpha \in \mathcal{P}$.
- 4 A/P_α is h-local for all $P_\alpha \in \mathcal{P}$.

Example 4: only (4) fails

Let $A = K[X, Y, Z]$ and

$\mathcal{P} = \{\text{nonzero principal prime ideals of } A\}$.
